ABSTRACT OF THE DISCLOSURE

The invention relates to a novel pharmaceutical combination. The inventive pharmaceutical composition, which is intended for the treatment of pathologies linked to gastric hyperacidity, comprises a combination of tenatoprazole and one or more histamine H₂-receptor antagonists preferably selected from cimetidine, ranitidine, famotidine and nizatidine. The invention is particularly suitable for the treatment of duodenal and gastric ulcers and the symptoms of, and lesions caused by, gastroesophageal reflux.
